

An automated pipeline that mines public agency directories for small-to-mid Indian IT-services firms, filters them down to net-new, in-target companies, then enriches founder contacts for cold outreach. Every stage is deterministic and re-runnable; firms already in the CRM are never re-emitted.

CRAWL Scrape Directory listings → raw firm rows	BUILD Gate Canonicalize, dedupe, filter	ENRICH Contact Founder phone / email / LinkedIn	SCORE Verify Confidence + namesake guard	SYNC CRM Upsert to HubSpot pipeline
---	---	---	--	---

1 · Scraping

Phase 1 — Crawl

- Source: GoodFirms directory (live-verified — listing carries name + website + founded year + size band). Clutch & TechBehemoths crawlers built, held off until profile-page parsing lands.
- Coverage: 20 Indian tech hubs, paginated up to 12 pages/city.
- Politeness: 1 request per host · randomized 2–5 s delay · 3 retries · 45 s timeout · rotating identifiable LH2Bot user-agents (+contact: data@lh2.ai).
- Extracted per firm: company name, website/domain, founded year, headcount band, city, segment, source.
- Output: cached gzipped HTML + raw_listings table.

2 · Gating

Phase 2 — Build

HQ country	Must be India.
Age	Founded ≤ 2022 — real operating history, not a fresh startup.
Size	50–1,000 employees. Directory ranges → range midpoint as representative headcount; bucketed 1-100 / 100-500 / 500-1000. (≥ 50 gate per current request.)
Outsourcers	Hard blocklist of ~20 majors (TCS, Infosys, Wipro, HCL, Cognizant, Capgemini, Accenture ...) — never targets.
Net-new	Excluded if already known — by domain (delivered ledger of all HubSpot company domains) and by name (Google-Sheet + HubSpot IT-firm roster).
Dedupe	Canonicalize domain + name; collapse duplicate listings across pages/cities.

3 · Enrichment

Phase 3

- Provider: Signalhire — returns founder name + LinkedIn + phone + email together in one lookup.
- India filter: only +91 mobile numbers are kept as call-ready primaries; foreign numbers/domains dropped.
- Cost control: hard credit cap + persistent daily/monthly quota tracking so credits are never overrun.

4–5 · Verify & Sync

Phase 4–5

- Confidence score per firm; a namesake guard (fuzzy match ≥ 88) rejects mismatched people so a contact never gets pinned to the wrong company.
- CRM upsert: companies by domain, contacts by email, deals into the Scraped → Cold Call stage, tagged ITservices, owner + PoC assigned — idempotent on re-run.
