

LH2 Company Ops-Data Acquisition — GTM SOP

Who this is for: everyone working the **Company Ops Data** pipeline in HubSpot (portal 246897735) — GTM analysts, meeting owners, and closers.

What we buy: a company's **internal operating know-how / ops data** — the reusable blueprint for *running* that kind of business: SOPs, playbooks, process docs, internal tooling & workflows, org structure, vendor/ops setup and operational records.

What we do NOT buy here: codebases (that's the other pipeline/portal) and consumer/product analytics.

This line starts on LinkedIn, not the phone. Entry is a cold LinkedIn message; the phone only appears as a follow-up channel.

⚠ Open item — where cold leads come from is not decided yet

This SOP covers everything **from the moment a lead is in HubSpot at Begin Here** . How that list gets *built* — scraped, bought, sourced from a directory, exported from Tracxn/LinkedIn Sales Navigator, or hand-picked — **is still to be defined. Until it is:** work only the leads loaded into the pipeline for you, and don't self-source. Once the sourcing method is agreed, it gets documented here and the **Lead Source** field on the deal must be filled on every lead.

The rule above all: never make up data. No number, no name, no answer → leave it blank and note why. A blank is correct; an invented value is a bug.

1. Roles: PoC and POD lead

- PoC (Point of Contact)** = *the analyst who sent the first LinkedIn message*. This **never changes** for the life of the deal (field: **PoC**).
- POD lead** = *whoever is driving the deal right now* = the **Deal Owner**. It changes hands as the deal matures.

Phase	POD lead (Deal Owner)	Pool
Begin Here → GMeet Fixed	outreach analyst	GTM
GMeet Fixed → Sample Received	meeting owner	Meeting owners
Sample Received → Closed/Won	closer	Closers

Today this portal has one user — Kartik Pillai. Until more seats are added, Kartik is PoC *and* POD lead at every phase; keep the **PoC** field filled anyway, so the handoffs work the moment the team grows.

Mandatory handoffs (rules, not suggestions):

- At GMeet Fixed** : paste the **GMeet Link + GMeet Date** into the deal, then reassign **Deal Owner** → **meeting owner**.
 - At Sample Received + Interest Gauge** : the sample is handed to the **owner** to gauge against demand — fill the sample fields **before** the handoff.
- The **PoC stays the same** through all of it.

2. The pipeline at a glance

🔒 = fill the field before advancing. → = mandatory handoff. ** 📄 = every Dead/* needs a one-line note (why) before you move it.**

3. Start of your day

1. HubSpot → CRM → Deals, pipeline **Company Ops Data, Board** view.
2. Filter **Deal owner = you** → save as "**My Deals.**"
3. Work in this order:
 - **Replied** (hottest — a human is waiting on you)
 - **Sample Follow-Up** and **Samples Requested** (deals stall and die here)
 - **Message Back / Ghost Follow-Up** due today
 - **Begin Here / Profile PreScreen** (new leads)
4. Anything with **Next Follow-up = today** gets touched today.

4. The outreach sequence — timings

Step	When	Channel
Msg 1 — cold LinkedIn	day 0	LinkedIn
Message Back — cold email + 2nd LinkedIn message	+1–2 days after no reply	Email + LinkedIn
Ghost Follow-Up — they agreed, then went quiet	+1–2 days after silence	LinkedIn/email/call
Sample Follow-Up — sample not received	+1–2 days after the request	Email + call back

Two silent touches on the cold sequence, then **Dead/Cold/No Reply**. Don't chase past that — log it and move on.

5. Every stage explained

● Begin Here

- **Means:** lead is loaded in the pipeline, nothing sent yet. You are the **PoC**.
- **Enter:** PoC (+ **Lead Source** once sourcing is defined — see the open item at the top).
- **Move on:** → Profile PreScreen.

🔍 Profile PreScreen

- **Means:** judge fit **from the LinkedIn profile / company page — before contacting**.
- **Look for:** did they actually *run an operation*? Real headcount, multi-city/field ops, logistics, delivery, fulfilment, commerce/inventory, manufacturing, lending-collections, healthcare-delivery. Pure-software/SaaS with no operation → wrong fit (that's the codebase line).
- **Enter (🔒): PreScreen Result** (Good Fit / Wrong Fit).
- **Move on:** Good fit → **Cold LinkedIn Sent**. Wrong fit → **Dead/Cold/WrongFit** 📄 (no message was sent — this is not an outreach attempt).

● Cold LinkedIn Sent

- **Means:** msg 1 is out.
- **Enter (🔒): LinkedIn Msg 1 Sent** date. Set **Next Follow-up** = **+1–2 days**.
- **Move on:** reply → **Replied**. Silence after 1–2 days → **Message Back**.

● Message Back (Email + 2nd Msg)

- **Means:** the second touch — ****cold email and a second LinkedIn message.****
- **Enter (🔒): LinkedIn Msg 2 Sent** and/or **Cold Email Sent**; bump **Follow-Up Count**.
- **Move on:** reply → **Replied**. Still silent → **Dead/Cold/No Reply** 📄.

● Replied

- **Means:** they responded and there's a conversation.
- **Enter (🔒): Replied At**.
- **You do:** qualify + push for a GMeet.
- **Move on:** books a meeting → **GMeet Fixed**. Not interested → **Dead/Cold/Not Interested** 📄. Agreed then went quiet → **Ghost Follow-Up**.

● Ghost Follow-Up

- **Means:** they said yes, then stopped replying.
- **You do:** one more nudge after 1–2 days.
- **Move on:** replies → back to **Replied**. Still silent → **Dead/Cold/No Reply** 📄.

● GMeet Fixed — 🔒 + → handoff

- **Means:** the meeting is booked.
- **Enter (🔒):** **GMeet Link** + **GMeet Date**, then reassign **Deal Owner** → **meeting owner**. PoC stays you.
- **On the call:** understand what they ran, what systems hold the data, what documentation exists — and **surface privacy early** (this is the #1 objection on this line).
- **After the call (🔒):** set **GMeet Outcome** (Proceeds / Wrong Fit / Privacy Concerns / No Show).
- **Move on:** Proceeds → **One Pager + Deck Shared**. Wrong fit or no-show → **Dead/Interested/No Show** 📄. Won't share data on privacy grounds → **Dead/GMeet/Privacy Concerns** 📄.

● One Pager + Deck Shared

- **Means:** we've sent **our one-pager + company deck** so they can see who we are and what we buy.
- **Enter (🔒):** **One Pager Sent** date. When their filled one-pager comes back, set **One Pager Received**.
- **Move on:** → **Internal Evaluation (Sample)**.

● Internal Evaluation (Sample)

- **Means:** we decide internally whether their ops data is worth collecting a sample of.
- **Enter (🔒):** **Ops Data Types** (SOPs & playbooks, process docs, internal tooling, CRM records, transactions, logistics, inventory, HR/org, vendor...), **Systems of Record**, and where known **Record Count**, **Data Covers From/To**, **Data Format**, **SOP Docs Available**.
- **Enter (🔒):** **Internal Evaluation Result** (Good Fit / Wrong Fit - Rejected).
- **Move on:** Good fit → **Samples Requested**. Wrong fit → **Dead/Sample Not Collected/Wrong Fit-Rejected** 📄.

● Samples Requested

- **Means:** we've asked them for a **redacted sample extract**.
- **Enter (🔒):** **Sample Requested** date. **Next Follow-up** = +1–2 days.
- **Say this:** sample should be **representative, redacted, small** — enough to judge structure and quality, not the full set.
- **Move on:** arrives → **Sample Received + Interest Gauge**. Nothing → **Sample Follow-Up**.

● Sample Follow-Up

- **Means:** chasing the sample — **email + call back**, 1–2 days.
- **Enter:** bump **Follow-Up Count**.
- **Move on:** arrives → **Sample Received + Interest Gauge**. Still nothing → **Dead/Sample Not Received/Company No Show** 📄.

● Sample Received + Interest Gauge — 🔒 + → handover

- **Means:** the sample is in, and it goes to the **owner to gauge against DEMAND** (do our buyers actually want this?).

- **Enter (🔒, before the handover):** **Sample Received** date · **Sample Format** · **Sample Quality Score (0–100)** · **Completeness %** · **PII Present** · **PII Scrub Required** · **Interest Gauge** (Strong / Moderate / Weak / Wrong Fit - Rejected).
- **Move on:** demand says yes → **Token Amount Paid**. Demand says no → **Dead/No Interest from Demand/Wrong Fit-Rejected** 📄.

● **Token Amount Paid**

- **Means:** we pay a token amount once the sample is in — it builds trust and puts **skin in the game on both sides**. This is unique to this line.
- **Enter (🔒):** **Token Amount Paid (USD)** + **Token Paid At**.
- **Move on:** → **Commercial Negotiations**.

● **Commercial Negotiations**

- **Means:** price and scope for the full data set.
- **Enter (🔒):** **Deal Value Range (\$)**; keep **Compliance / DPA Notes** current (restrictions, jurisdiction, what must be scrubbed).
- **Move on:** agreed → **Deal Contract Signed**. Price gap → **Dead/Negotiations/Pricing** 📄. Terms → **Dead/Negotiations/Contractual** 📄.

● **Deal Contract Signed**

- **Means:** purchase agreement + **DPA** signed, and the **PII scrub plan is agreed in writing** (what's removed/anonymised before it reaches us).
- **Move on:** → **Data Migration Done**.

● **Data Migration Done**

- **Means:** the full data set has been transferred to us and checked.
- **Enter (🔒):** **Data Volume (GB)**, final **Record Count**, **Data Migration Done At**; confirm the scrub was applied.
- **Move on:** → **Payment Initiation**. If delivery collapses (can't extract, scrub blocked, data not as promised) → **Dead/Migration/Failed** 📄.

● **Payment Initiation**

- **Means:** the balance payment is being processed.
- **Enter (🔒):** **Deal Cost (USD)** — total we pay for the data (the token counts toward it) + **Payment Initiated At**.
- **Move on:** → **Closed/Won** once paid.

🏆 **Closed/Won**

- **Means:** paid and delivered. **Send the client closure email + the internal notification email**.
 - **Confirm:** Deal Cost, Data Volume, Record Count and Ops Data Types are all filled — that's what the dashboard reports on.
-

6. ● Dead stages — `Dead/{Stage}/{Reason}`

Died at	Use this
Screened from the profile, never contacted	Dead/Cold/WrongFit
Replied, not interested	Dead/Cold/Not Interested
Never replied after 2 touches, or ghosted and stayed silent	Dead/Cold/No Reply
Agreed but no-showed / wrong fit at the meeting	Dead/Interested/No Show
Won't share data — privacy/legal	Dead/GMeet/Privacy Concerns
Internal evaluation says not worth sampling	Dead/Sample Not Collected/Wrong Fit-Rejected
Sample never arrived after follow-up	Dead/Sample Not Received/Company No Show
Sample came, but demand doesn't want it	Dead/No Interest from Demand/Wrong Fit-Rejected
Price gap	Dead/Negotiations/Pricing
Contract terms	Dead/Negotiations/Contractual
Delivery failed after contract	Dead/Migration/Failed

Every dead is mandatory-noted 📝 — one line of *why*, in the deal notes, **before** you move it. No note, no dead.

7. Golden rules

1. **Never fabricate.** Blank + reason beats a guess.
2. **PoC never changes. POD lead (owner) moves at GMeet Fixed and at Sample Received.**
3. **PreScreen before you message** — set **PreScreen Result**; wrong fits never get contacted.
4. **Two silent touches, then dead.** Msg 1 → (+1–2d) Message Back → **Dead/Cold/No Reply**.
5. **GMeet Link + Date are required at GMeet Fixed** — then hand the deal over.
6. **Raise privacy early**, on the GMeet — not after the sample request. It's the top killer on this line.
7. **Samples are redacted and representative** — never ask for the full set before contract.
8. **Fill quality score, completeness, PII flags and Interest Gauge before the demand handover.**
9. **Token is paid only after the sample is in** and demand is positive — never before.
10. **No data moves before the contract + DPA**, and the **scrub plan is agreed in writing**.
11. **Deal Cost (\$)** at Payment Initiation; **both emails at Closed/Won**.
12. **Every Dead needs a note.** Pick the exact `Dead/Stage/Reason`.
13. **Always log the activity + set the next follow-up.**

8. Example walkthrough — a deal that closes

Illustrative. "Metro Logistics / Anil (founder)" is made up.

1. **Begin Here** (you = PoC). Profile shows a 120-person multi-city delivery operation → **PreScreen = Good Fit** → **Cold LinkedIn Sent** (Msg 1 logged, follow-up +2d).

2. Silence → **Message Back**: cold email + 2nd LinkedIn message. Anil replies → **Replied**.
3. He books a call → **GMeet Fixed**: paste link + date, **hand owner to the meeting owner**. On the call he asks about customer data — privacy is addressed up front; he's fine with a redacted sample. **GMeet Outcome = Proceeds**.
4. **One Pager + Deck Shared** → he returns it → **Internal Evaluation (Sample)**: Ops Data Types = *SOPs & playbooks, logistics/delivery, vendor*; Systems = *custom TMS + Tally*; **Result = Good Fit**.
5. **Samples Requested** → nothing in 2 days → **Sample Follow-Up** (email + call) → sample lands → **Sample Received + Interest Gauge**: quality 78, completeness 60%, **PII present** → **scrub required**, **Interest Gauge = Strong** → handover to owner.
6. Demand says yes → **Token Amount Paid** (\$500, logged) → **Commercial Negotiations** (Deal Value Range \$8–12k) → agreed → **Deal Contract Signed** (DPA + scrub plan).
7. Full set transferred, scrub verified → **Data Migration Done** (42 GB, 1.2M records) → **Payment Initiation** (Deal Cost \$10k) → 🏆 **Closed/Won** + client and internal emails.

*(If demand had come back cold at step 6, it's **Dead/No Interest from Demand/Wrong Fit-Rejected** — and we'd still have paid nothing, because the token comes after the gauge.)*

9. Quick reference card

Situation	Stage / action
New lead loaded	Begin Here (set PoC)
Judged from profile	Profile PreScreen + PreScreen Result
Not our target, never messaged	Dead/Cold/WrongFit 📄
Msg 1 sent	Cold LinkedIn Sent + Msg 1 date, follow-up +1–2d
No reply after 1–2d	Message Back (email + 2nd msg)
Still no reply	Dead/Cold/No Reply 📄
They replied	Replied + Replied At
Agreed then quiet	Ghost Follow-Up
Meeting booked	GMeet Fixed + link + date + hand over
Meeting went well	One Pager + Deck Shared
Deciding if worth sampling	Internal Evaluation (Sample) + data types/systems
Asked for sample	Samples Requested + date, follow-up +1–2d
Chasing the sample	Sample Follow-Up (email + call)
Sample in	Sample Received + Interest Gauge + quality/PII/gauge → hand over
Demand says yes	Token Amount Paid + amount + date
Talking price	Commercial Negotiations + Deal Value Range
Signed (+DPA)	Deal Contract Signed
Data transferred	Data Migration Done + volume + records
Paying	Payment Initiation + Deal Cost (\$)
Paid + done	🏆 Closed/Won + both emails
Died anywhere	Dead/Stage/Reason + note why 📄

10. HubSpot how-to

- **Portal:** 246897735 · **Pipeline:** *Company Ops Data* (2464812771).
- **Move a stage:** drag the card, or open the deal → **Deal Stage**.
- **Reassign POD lead:** open the deal → change **Deal Owner**.
- **PoC:** set once at Begin Here — never change it.
- **Log activity / follow-up / notes:** deal record, right panel.
- **Contact fields** (LinkedIn URL, role, SPOC type, Outreach Status) live on the associated **Contact**.

11. Mail / message templates

To be supplied by the team. Slots reserved:

Step	Template
LinkedIn Msg 1 (cold)	TBD
Cold email + LinkedIn Msg 2	TBD
Ghost follow-up	TBD
Meeting invite	TBD
One-pager + deck email	TBD
Sample request	TBD
Sample follow-up (email + call script)	TBD
Token / contract covering note	TBD
Client closure email	TBD
Internal notification email	TBD
